

Corporate Profile

Founded	1997
Headquarters	Montebello, N.Y.
Employees	200
Customers (RCEs)	300,000
Sales (FYE 9/30/07)	\$358 million

(1) One RCE represents 100 Dth of annual natural gas consumption or 10,000 kWh of electric consumption.

Gateway Energy Services Corporation, based in Rockland County, N.Y., is one of the largest independent retail energy suppliers of natural gas and electricity to residential and business customers in 26 markets across six states, the District of Columbia, and Ontario, Canada. We operate as Gateway Power Services in Texas and as Gateway Energy Services Ltd. in Canada.

Founded in 1997, Gateway Energy provides competitive products to consumers, giving them more control over their costs. Our mission is to offer customers innovative solutions that provide pricing stability plus exemplary service while building one of the strongest independent energy providers in North America.

Company History

- 2007 Relocated corporate headquarters to Montebello, N.Y., and changed name to Gateway Energy Services Corporation.

- 2008 Received license in Ontario, Canada, to sell natural gas.

Your Energy, Your ChoiceSM

The History of Choice

Historically, natural gas and electricity were distributed to consumers in the U.S. and Canada exclusively by utilities with monopoly franchises granted by state, provincial and local governments. As individual states and provinces began to deregulate and open their retail energy markets to competition, consumers across North America became empowered to choose their energy supplier. Today, in deregulated markets, energy suppliers compete with one another to provide innovative and attractive pricing plans tailored to meet customer requirements, while maintaining the highest level of service. The power of choice, made possible by energy deregulation, fosters competition and gives consumers more control than ever.

Our Products and Services

Gateway Energy Services offers a number of competitive energy products designed to meet the requirements of our residential and business customers.

Variable-Rate Plan provides maximum flexibility. Participants in this plan benefit from highly competitive pricing and our wholesale buying capabilities. With this choice, the variable rate changes monthly based on market conditions while customers maintain the ability to lock in a fixed rate at any time.

Fixed-Rate Plan protects against rising energy costs and market volatility. This plan provides customers with long-term price certainty for the full duration of their contract.

Price-Protection Plan combines the flexibility and competitive pricing of our Variable-Rate Plan with the security and price certainty of our Fixed-Rate Plan. With this choice, the customer's price rises and falls with the market, but will not exceed an agreed-upon cap.

Green Energy Plan offers customers the ability to purchase their electricity from renewable sources, thereby contributing to a cleaner environment and reducing their carbon footprint.

The Gateway Energy Difference

Since 1997, customers have relied on Gateway Energy Services to deliver competitive prices, innovative products and personalized customer service. Our sole purpose is to provide consumers with the tools to manage their natural gas and electricity costs efficiently. We offer a number of pricing options that can reduce our customers' energy costs and provide security against rising energy prices. We have professional energy advisors who work with our customers to understand their needs and make recommendations based on their specific circumstances and the performance of the energy markets. Our wholesale energy buyers are specialists in their fields and are able to purchase and deliver natural gas and electricity in an extremely cost-effective manner, providing Gateway Energy with the ability to offer highly competitive prices to our customers.
